DETAILED ACTION

1. Applicant's election without traverse of group II, claims 10-26 in the reply filed on April 26, 2005 is acknowledged.

Double Patenting

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 10-26 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-47 of U.S. Patent No. 6,360,595 to Lin et al. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims of the instant invention are similar to those of the '595 patent, but for the additional presence of a chemical in the claims of the instant invention. The claims of the '595 patent are broader in all respect to those of the instant invention due to the patent's use of "comprising" language,

which would allow additional components to be present. Further, in defining the barrel component of the '595 patent, Lin et al teaches in the disclosure that the barrel may comprise a reactant, such as sodium bisulfite. Lin et al also further defines the device as one being capable of determining the presence of an aldehyde, such as OPA.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 10-26 are rejected under 35 U.S.C. 102(e) as being anticipated by US patent 6,360,595 to Lin et al.

Lin et al teach a liquid measuring device comprising a pipette (7) or syringe with needle at a distal end (6) having a gas permeable and liquid impermeable barrier (1). The barrier can be formed into the pipette or syringe by way of an insert (4) and holder (5). The pipette or syringe may have two chambers (barrels 9, 10), both chambers having a chemical reactant such as sodium bisulfite (col. 6, lines 34-40). Lin et al teach

that the analytes of interest may be an aldehyde, such as OPA (col. 4, lines 38-59).

According to figure 3 of the reference, the insert may be H shaped or U shaped. Also, a valve may be included in the device (col. 6, lines 35-43).

Therefore, for the reasons set forth above, Applicants' claimed invention is deemed to be anticipated within the meaning of 35 USC 102(e) by Lin et al.
